

AUDIO & VIDEO TELEPHONE HANDSET DATASHEET

Neon supply a range of audio and video telephones with a variety of functions to suit most applications. Please see over for full details of the functions available.

Telephones are manufactured from high-impact resistant ABS plastic in neutral colours to blend with all decors. All have high quality electret microphones and high efficiency earpiece ensuring excellent speech reproduction.

Multiple Handsets can be fitted into one apartment, all working in parallel, although if required due to impaired mobility our **Telephone Interface** unit would be more practical than a handset in every room!

Lock Button Anti-Tamper Facility is built into every Neon system - if a lock button on a handset is jammed-on the door **WILL NOT** unlock when the phone is called - the visitor is told via the panel display that there is a lock button fault and after the resident has answered the call the lock button must be un-jammed before it can be used to allow access to the visitor.

Privacy Button Anti-Tamper Facility is standard on some privacy telephones (ND3 and ND4). If the privacy button is jammed down (or gets stuck) then the privacy circuit will be automatically disconnected allowing calls to be made to the handset.

DDA OPTIONS

Any telephone can be augmented with a variety of optional extras to enable all residents to use the door entry system, from basic flashing strobes to alert hard of hearing residents through to integration with many third-party specialist systems e.g. possum controls, etc etc. Please contact us for specific assistance.

PICTORAL SYMBOLS

To assist with the multi-lingual needs of our population Neon telephones have clear pictorial symbols to show the function of the necessary controls needed for residents to operate the system such as privacy and lock functions as well as door open/left open indication.

TELEPHONE HANDSET CHOICE
