

## Neon Functional Panel (for up to 12 flats)

### Why are customers choosing Neon door entry systems?

- The only system designed to allow the use of many existing handset types – upgrade existing systems cost effectively
- British design and manufacture – highly vandal resistant
- Designed to combat increasing security issues in today's housing stock
- Optional active, scrolling display, deters vandalism
- Easy integration with Proximity systems e.g. PAC, KMS etc – all panels have space for a panel mount reader
- Belt and braces design and build philosophy from designers with over 60 years collectively in the door entry market
- Many built-in unique features - see over for full details.

**Door Entry As It Should Be**

# Neon Functional Panel

## Standard Features & Options

- High quality 20mm stainless steel buttons are used and feature a replaceable micro-switch insert. Each button is grouped with its associated address number by a DDA yellow ring ensuring the correct button is always pressed.
- **Functional panels** with up to 12 buttons in any configuration, including trades button.
- The **active display** (optional, but recommended, on functional panels) gives full call progress and other information for the user and engineer.
- The system can **use most types of tone-call handset on the market** – upgrading an existing system can often be achieved using the existing wiring and handsets – just replace panels and distribution units.
- Very **high quality audio** giving loud clear speech without feedback – the audio bandwidth is actively enhanced to give clarity for users with poor hearing.
- System is **fully line isolated** – any fault or vandalism of a handset or wiring will not affect any other part of the system.
- Optional large clear bright **blue display module** – extremely legible for all and especially for partially sighted users.
- Unique built in “**Soft Close**” technology for mag-lock installations – no more noisy, banging entrance doors to disturb residents.
- Optional active **scrolling display** when the system is idle that deters vandalism.
- **No add-on boards required** – the system comprises 2 circuit boards with no central equipment. Digital and functional systems use the same boards – all features are built-in and can be easily set up using the free software supplied with the system. This means minimal spares required to service/repair any system.
- Up to **255 door panels** on a system – there is no technical limit – mix all types of digital and functional panels as required.
- Up to **2040 flats** on a system with up to **10 handsets per flat**.
- **Direct trades access** – if trades button is required just pressing it will open the door at times set by the trades time clock.
- Automatic **GMT/BST** time clock changes – no need to send an engineer to site and adjust time clocks twice a year.
- **Anti-tailgate** feature can be enabled in software to cut short lock release time as soon as the door is physically opened.
- **Wiring faults etc are reported to the engineer** via the door panel (when optional display is fitted) making service and commissioning very easy – even identifies which wire within the interconnect cable has a fault condition.
- Simple connection of add on items in a flat such as **flashing beacons, extra sounders, multiple handsets** – no interfaces needed, connect straight to system.
- **3 year warranty** – all Neon OEM products benefit from a unique 3 year warranty.
- Neon Door Entry Systems are fully compatible with a **RING Interface**. Which means you now have the ability to answer your home door entry system wherever you are with your mobile phone.
- Optional **Call Divert** facility – in certain applications, it is useful to be able to divert calls to a communal area, sheltered housing schemes for example. This means a resident can go to the communal lounge and still receive their visitor calls. Calls are diverted to a phone in the communal lounge and a large text display shows which resident the call is for.
- Optional **Video Handset** – the Neon system distribution units can be supplied with built-in video drive facility enabling high quality colour video telephones to be utilized via standard telephone type cabling.

*Neon Secure Access Ltd design, manufacture and supply high quality door entry systems. Neon do not install but provide full manufacturers back-up to installation companies and, if required, can offer commissioning services.*
