

Neon Fusion Concierge System

Do you require a Concierge door entry system?

Turn any Neon door entry installation into a Concierge System using the Neon Fusion Concierge Interface.

Any existing or new Neon Secure Access door entry installation can become a fully functional high specification Concierge system by the simple addition of the Neon Concierge Interface Unit (NCIU). This unit connects to the door entry system in each residential block.

Up to 999 blocks can be connected to the PC running our very easy to use Neon Fusion Concierge software.

The system can not only control the residential blocks but also control car park gates / barriers / communal areas / public address etc with full two way very high quality duplex speech. Also used in lifts for emergency calls to and from the Concierge.

Contact Lynn Cook on 07715 219 015 for further details.
